JHONER PINEDA

Software Engineer

Full Stack developer. I specialize using the MERN stack and I have acquired some previous experience using Angular for Frontend. For backend I have also used Django and GraphQL for my personal projects and Spring Boot professionally. In addition to being experienced in Non-Relational Databases I have professional experience with MySQL and Postgres. Additionally I love Python and tinkering with data sets because I am a big data and ML enthusiast.

JOB EXPERIENCE

Software Engineer- Lovepop

From January 2022 - July 2022

Helped develop features on the e-Commerce site meant to increase revenue per session such as Send a Surprise, Upsells and improve site usability and accesibility,
- A/B Feature testing.
- Shipped high-quality code with a focus on scalability, performance, and accessibility.
- Contribuited in refactoring the code base to use Typescript.

Software Developer- Indra

From September 2021 - January 2022

Developing new solutions for Onesait products and giving support to current ones such as the Customers platform.
- Migrating web modules from AngularJS to ExtJS.
- Creation of Restful APIs with Spring Boot.
- Various in house React forms.

Junior Software Developer- Proteccion S.A

From February 2021 to August 2021

Built several responsive features using React, React-Dashboard and Redux. Managed endpoints in the back-end using Django to retrieve data for the front-end.
